Survey Date- June 10th 2017

Summary

Hortech were asked to survey this site as part of the new Wrexham County Borough Council Invasive Weed Control Contract.

Areas of Japanese Knotweed were identified on land controlled by the council. One area of Japanese Knotweed is within the site boundary, several larger stands of Japanese Knotweed are along banks of the river Gwenfro.

Japanese Knotweed Management Plan

From information provided by the council and from inspection of the site, no treatments have been carried out on this area to date.

It is advised that the Japanese Knotweed on this area is treated using combination of stem injection a spray applications of the approved herbicide Roundup Provantage twice per season for at least three seasons.

This area will require ongoing monitoring for at least a further two seasons 2020 and 2021 with any regrowth sprayed as required, ongoing monitoring of the site will be

required on an annual basis following completion of treatments to ensure regrowth does not re-appear.

There are five main stands in the vicinity of the council building and two stands approximately 200m downstream.

The small stand that falls within the property is approximately 2sqm, the areas of Japanese knotweed not within the fence-line of the property but immediately outside on the river banks total approximately 140sqm and the stands downstream total approximately 45sqm.
