Horizontal Sliding Secondary Glazing

Designed to match your existing windows, horizontal frames slide smoothly open and closed on aluminium runners, helping keep heat in and draughts out.

Hinged Secondary Glazing

This option is ideal for traditional casement windows, as the secondary glazing swings open on a small hinge, in line with the mechanism of the window behind it.

Vertical Sliding Secondary Glazing

Perfect for box sash windows, the panels in these vertical sliding frames move easily up, down and can tilt inwards to provide easy cleaning access to the original window.

What is Secondary Glazing?

Secondary glazing is a window fitted behind an existing one. This adds insulation and helps reduce outside noise without the cost and mess of completely replacing a window. Secondary glazing is often a solution for single glazed listed properties where window replacement is not an option.

Secondary glazing comes in a range of styles to suit different properties and window types.

Customer Reviews

Secondary Glazing Explained

How Does Secondary Glazing Work?

Secondary Glazing sits behind existing single or double glazed windows. The gap between the windows adds a layer of insulation, helping stop warm air leaving yo room and cold air getting in. This space also reduces the amount of sound that c travel through your windows from the outside into your room.

Do You Need Planning Permission for Secondary Glazing?

Secondary glazing is ideal for period properties that are either listed or in a protected area because it does not tend to need planning consent. So long as the secondary glazing is reversible and installing it would not damage the fabric of th building, frames of the existing windows or other protected features, then it shou not need planning permission.

How Much Does Secondary Glazing Cost?

Because no one home is the same, the cost of secondary glazing is unique to eac customer and their needs. How much secondary glazing costs is determined by the size of the window opening the requirements for installation. To get the perfect fit and benefit from as much thermal and sound insulation as possible bespoke secondary is the best option.
