### Preliminary Unexploded Ordnance (UXO) Threat Assessment

Meeting the requirements of the UK's
Construction Industry Research and Information Association's UXO Risk Management Framework
"Unexploded Ordnance (UXO) – A Guide for the Construction Industry" (C681)

Landmark Information Group in partnership with 6 Alpha Associates Ltd

Project No.: 11155

21st March 2024

V1.0

Achilles BUILDER'S PROFILE Institute of Explosives Engineers CCC

## Using This Report

This Preliminary Threat Assessment is designed to inform the reader whether military related Unexploded Ordnance (UXO) is likely to pose a hazard at the Study Site. The assessment is intended as a site-screening tool to meet with the requirement of Stage 1 of the *Health and Safety Executive* endorsed *CIRIA C681 UXO Risk Management Framework* – for which *6 Alpha* were the lead technical author. Whilst the term "Risk" can be justifiably used at this stage, the reader should note that the "Consequence" function of "Risk" is not considered.

There are two prospective outcomes of this report; either the threat level requires a Detailed Threat and Risk Assessment with Risk Mitigation Strategy (Stages 2 and 3 of the *CIRIA C681* framework); or no further action is required.

Two figures accompany the report, the first is the Site Boundary which clearly depicts the area covered by this assessment and the second is the Probability of UXO Encounter at the Study Site. The latter will illustrate any variance in the probability of encountering UXO throughout the Study Site.

Web: www.envirocheck.co.uk

## Document Scope

In partnership with the *Landmark Information Group*, *6 Alpha Associates Limited* (6 Alpha) has been commissioned to provide a UXO Threat Assessment for the Site described as "Higher Oak, Oak Road, Wrexham Industrial Estate, WREXHAM, LL13 9RG", which is centred on *National Grid Reference* 338585, 349378.

## Key Findings

During WWII, the Study Site was situated within *Wrexham Rural District*, which recorded one HE bomb strike per 100 hectares; categorised as a "very low" level of bombing.

*Luftwaffe* aerial reconnaissance photography identified an *Ammunitions Dump* (located on-site) as a primary bombing target. Extensive research of historical records identified this as *Royal Ordnance Factory (ROF) Wrexham*, which was opened shortly after the outbreak of WWII. *ROF Wrexham* was chosen for its rural location whilst simultaneously being situated in close proximity to various railway networks, with the factory itself mainly manufacturing *cordite* – an explosive propellant utilised in artillery shells. Three pillboxes were similarly noted within a 1,000m radius of the Study Site for the defence of *ROF Wrexham*, the closest of which was situated 840m south-east.

Neither *Air Raid Precaution* (ARP) records nor official bomb damage mapping were available. Nonetheless, extensive research of historical records, in addition to an analysis of post-war mapping, did not identify any evidence of WWII-era bombing or bomb damage on-site nor within a 1,000m radius.

Therefore, *6 Alpha* considers the most likely UXO threat at this Study Site are *British* AXO/LSA/SAA, whilst *German* HEs, IBs and *British* AAA projectiles may pose a residual threat.

## Recommendations

Given that *ROF Wrexham* was located on-site and was a designated primary bombing target; *6 Alpha* considers it reasonably foreseeable that a UXO contamination threat might have been generated at this Study Site. Consequently, and in accordance with *CIRIA* C681 Chapter 5 on managing UXO risks, *6 Alpha* recommends that the next step in managing the prospective UXO risk at this Study Site is:

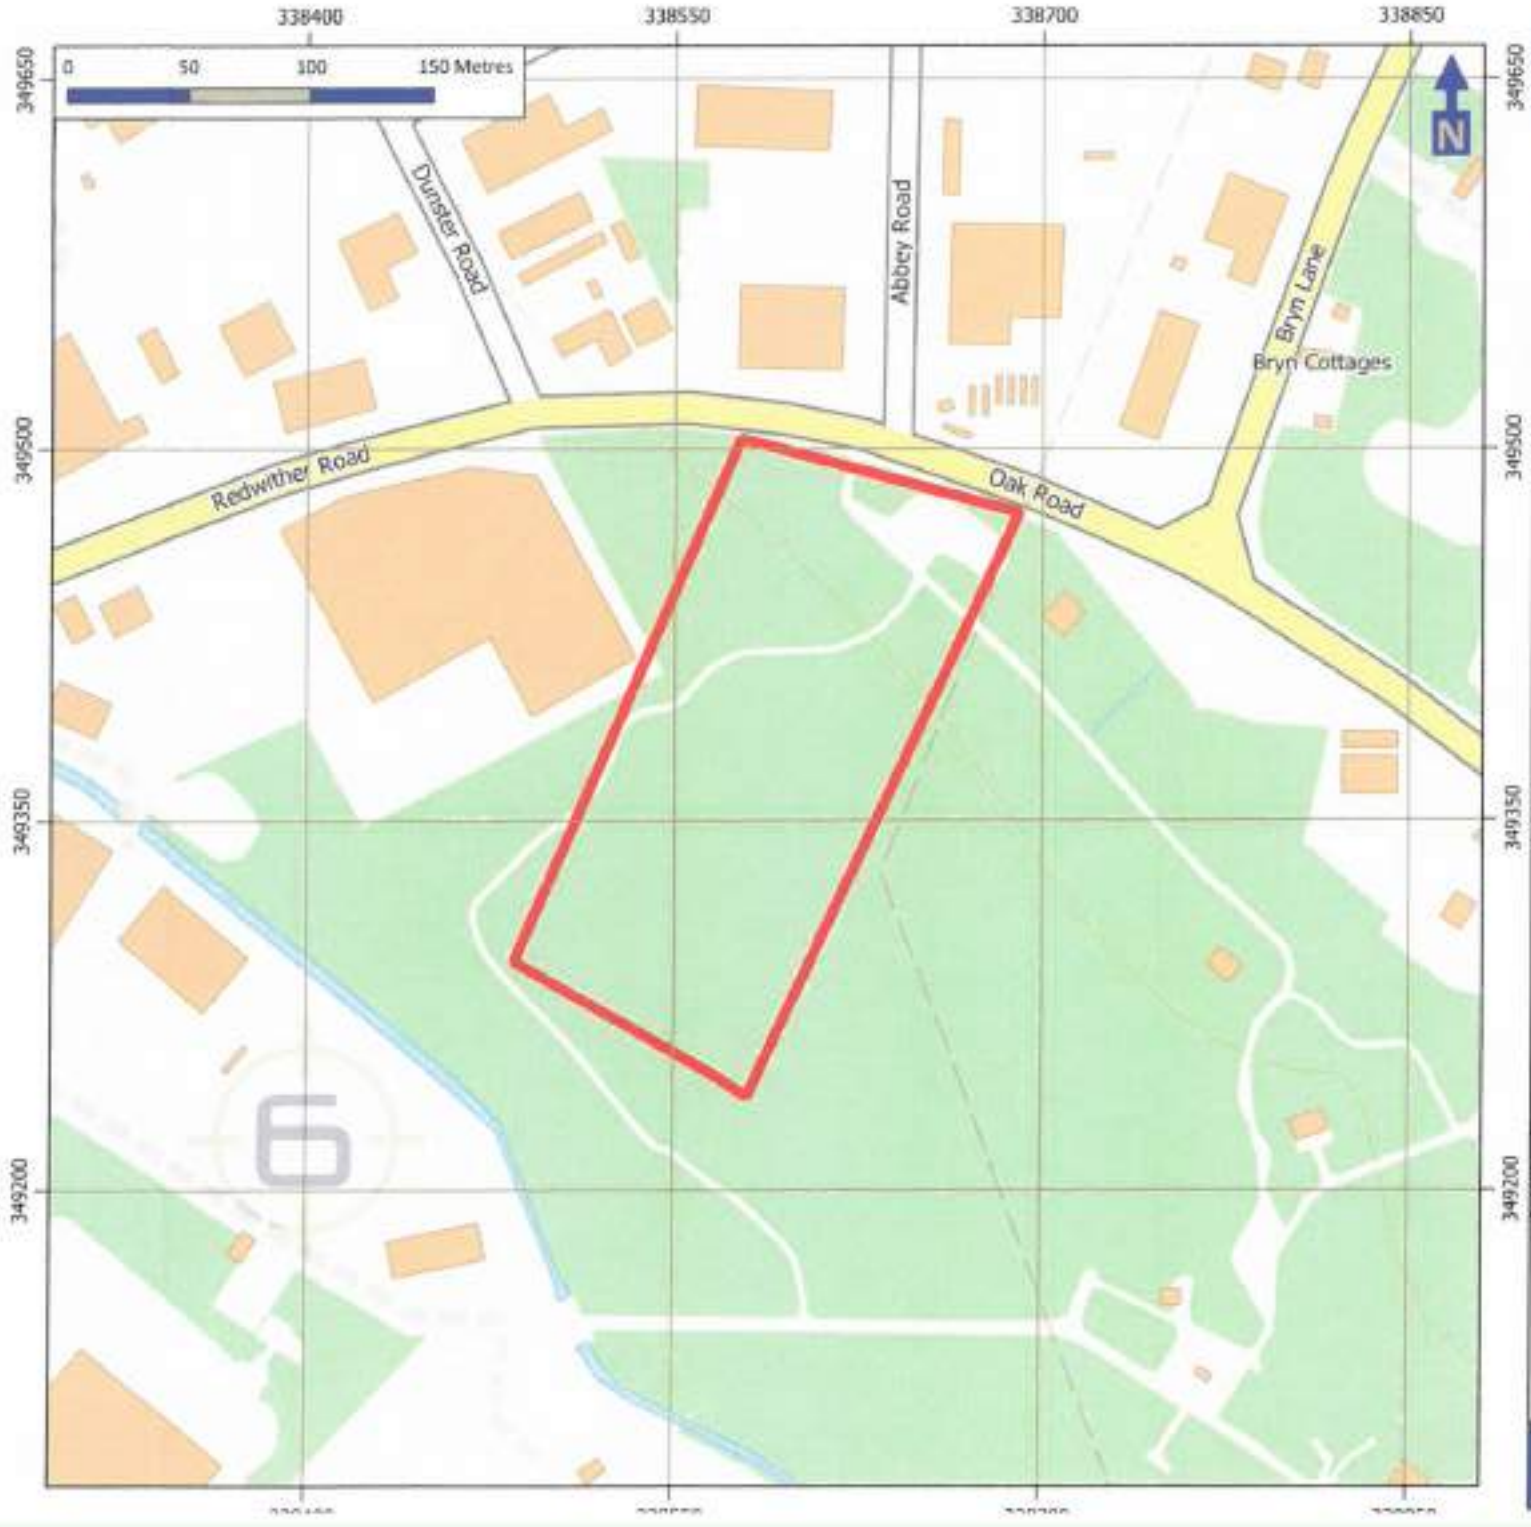

**DETAILED UXO THREAT AND RISK ASSESSMENT**

Please contact *Envirocheck* for further details.

## Constraints

The report is also constrained by the following factors:

1. The assessment levels have been generated from historical data and third-party sources. Where possible *6 Alpha* have sought to verify the accuracy of such data, but cannot be held accountable for inherent errors that may be in third-party data sets (e.g. *National Archives* or library sources);
    a. Nonetheless, *6 Alpha* have exercised all reasonable care, skill and due diligence in producing this report;
2. Whilst every effort has been used to identify all potential UXO/explosive threats, there were a number of private facilities which may not have released privately recorded information concerning UXO/explosive threats into the public domain;
3. This report is accurate and up to date at the time of writing but cannot account for the release of new information, nor for new evidence concerning the potential for a UXO hazard to exist at this Study Site, which is disclosed after the date of the report's release. Should further evidence of UXO sources be found, or if UXO is found at the Site or nearby in the future, then this assessment for the Study Site is to be reassessed and updated by *6 Alpha*.

# APPENDIX D

Photographs of Site Access

40

# APPENDIX E

## Initial CSM and Risk Assessment

## Oak Road, Wrexham Industrial Estate

## Initial Conceptual Site Model and Preliminary Risk assessment

| Source | Pathway | Receptor | Risk Matrix Assessment | Assessment of Linkage Significance/Potential Mitigation Measures |
|---|---|---|---|---|
| Contaminated Soils and Groundwater from historical and current on-site sources. | Direct Ingestion, direct contact and inhalation of dust, vapours and liquids | Future site users | Moderate to High | Post-war Ordnance Survey records indicate that the site was occupied by a number of structures, bunkers and hydrants linked by footways which the Preliminary UXO Threat report has identified as being an ammunition dump. By 1982 the bunkers and structures associated with ROF Wrexham had been removed from the map record and it is likely that any below ground structures such as bunkers were infilled with imported material.<br><br>There are no available records to indicate the nature of the infill material and given its age it is possible that the environmental controls in place at the time were limited in extent and scope. In the circumstances potential on-site contaminant sources comprise explosives, such as cordite remnant from the ammunition manufacturing process, and imported Made Ground used to infill and bunkers and other underground structures. |
| | | Construction workers | Moderate to High | Site workers may be exposed to Made Ground materials during the site enabling works and earthworks stage of the project. All site workers to wear appropriate PPE and adopt appropriate hygiene and safe working practices. |
| | Leaching and vertical and lateral migration | Controlled waters | Low to Moderate | There is no archive evidence to suggest that widespread contamination is present on site and the superficial Glacial soils are of low permeability. |
| | Direct infiltration in water supply pipes | Service Conduits | Low to Moderate | Water supply pipes may need to barrier grade if significant deposits of contaminant impacted Made Ground are encountered. |

| | | | | |
|---|---|---|---|---|
| | Plant uptake | Vegetation within soft landscape areas | Low | Phytotoxic contamination in near surface soils unlikely to be significant. |
| | Lateral migration through groundwater | Off-site neighbouring properties | Low | Off-site groundwater migration risks to nearby properties are considered to be low due to the low potential for significant on-site leaching to be taking place and the low permeability nature of the near surface natural formation. Also, groundwater flow direction is to the south towards a stream and there no properties located between the site and the stream where groundwater is likely to discharge. |
| Potentially contaminated groundwater: migration from off-site sources onto site | Direct contact or ingestion and inhalation of dust and vapours | Future site users | Low | The potential for contaminant impacted groundwater to migrate onto the site is considered to be low due to the absence of a significant upstream contaminant source. |
| | Vertical and lateral migration | Controlled waters | Low | As above. |
| Ground gases generated on-site | Vertical and lateral migration | Buildings and human occupiers | Moderate | Made Ground deposits may be present that could have the potential to generate ground gases. Characteristic Situation category to be determined at site investigation stage. |
| Ground gas migration onto site from off-site sources | Lateral migration | Buildings and human occupiers | Low to Moderate | Some infilled ground associated with former below ground structures is likely to be present immediately to the east and west of the site and these materials may be generating ground gases principally carbon dioxide. |
| High sulphate and low p in site soils | Direct contact and within shallow groundwater | Below ground concrete | Low | No apparent source. |
