Electrical

The outdated wiring and lighting compromise safety and efficiency within the building; modern systems are crucial for a hospitality venue.

Retaining the older setups risks non-compliance with safety standards and poor energy efficiency. The new wiring provides enhanced safety, discreet down lighting solutions, better control for atmospheric lighting integral to music performances.

New wiring has been concealed through existing voids and behind the boarding, ensuring no harm has come to the building avoiding irreversible damage to original fabric.

Fire detection

In order to protect the building, I have installed a wireless fire detection system.

Plumbing

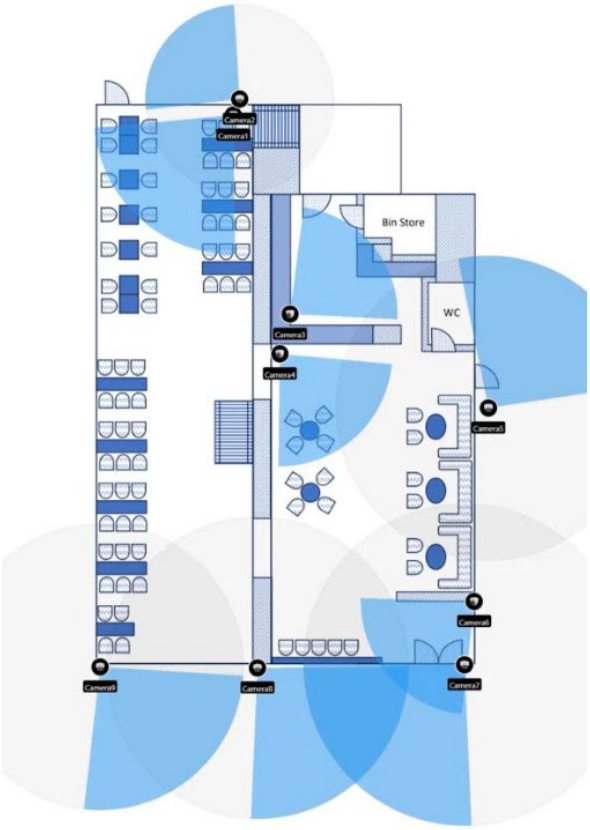

The existing pipe work has been utilised; however, new sanitary ware has been installed. This ensures cleanliness within the toilets.

Security

The security system that is being installed is to comply with licensing and police requests. We have again been able to conceal wired through existing voids and behind boarding, ensuring minimum harm has come to the building.
