Proposed New Vehicle Garage at Y-Bonc

YBVG Doc 001

Design Description

15 July 2026

The proposal is for the erection of a single storey garage to securely store domestic cars and a trailer.

It is proposed that the building will be constructed using locally sourced, traditional, materials which match those used on the immediately adjacent buildings. Specifically:

Walls –	locally sourced natural stone
Roof -	Reclaimed Welsh slate to match existing house
Fascias and soffits -	Softwood painted black to match existing house
Pedestrian door -	Natural oak to match existing house
Vehicular doors -	Natural oak to match existing house
Windows -	Powder coated Aluminium (RAL7016) to match existing house
Other -	Window and door heads and cills in slate to match existing house and outbuildings

It is also proposed that the new building incorporates particular features appearing on the existing buildings, specifically:

- Small, triangular dormer windows as found on the existing cowshed.
- Arrow-slit windows as found on the adjacent barns

The building has been sited close to the position of a previous barn, demolished some years ago. The proposed location also provides structure to the yard area, creating three distinct spaces to assist the movement of livestock through the domestic space.
